Axiom AI Technologies — Security Controls Assessment & Gap Analysis

ISO Controls Assessment — Executive Summary 27001:2022

Security Controls Assessment & Gap Analysis | ISO/IEC 27001:2022, NIST CSF, NIST SP 800-53

The security controls assessment has been completed. Remediation and control validation activities remain ongoing, with all 26 identified findings documented in the remediation plan.

1. Assessment Overview

Organization	Axiom AI Technologies	Assessment	Security Controls Assessment & Gap Analysis
Framework References	ISO/IEC 27001:2022; NIST CSF; NIST SP 800-53	Total Controls	40
Assessment Status	In Progress	Not Applicable Controls	0

2. Control Effectiveness

Effective Controls	14	Partially Effective Controls	17
Ineffective Controls	9	Control Effectiveness Rate	35%

3. Risk Findings

Total Findings	26	Critical Findings	0
High Findings	17	Moderate Findings	9
Low Findings	0	Findings with Remediation Plans	26 / 26 (100%)

4. Validation Status

Validated Controls	14	Controls In Progress	10
Controls Not Started	16	Validation Coverage	35%

5. Remediation Outlook

Remediation Plans	26 / 26 findings	Currently In Progress	10
Planned	16	Earliest Target Date	2026-11-30
Latest Target Date	2027-09-30	Remediation Status	10 In Progress / 16 Planned

6. Key Management Observations

- 40 controls were assessed across the in-scope ISO 27001:2022 control environment.
- 14 controls are currently assessed as effective, while 17 are partially effective and 9 are ineffective.
- The assessment identified 26 findings: 17 High and 9 Moderate.
- 14 controls have been validated; 10 are in progress and 16 have not yet started validation.
- All 26 identified findings have documented remediation actions and target dates; 10 are currently in progress and 16 are planned.
- The assessment remains In Progress, with remediation and validation activities scheduled through September 2027.

7. Assessment Scope & Interpretation

This executive summary presents the current status of Axiom AI Technologies' security controls assessment and gap analysis. Metrics reflect the assessment data at the time of completion and should be interpreted alongside the detailed Control Assessment and Remediation Plan. Validation status reflects whether control evidence has been validated, while remediation status reflects the implementation state of actions associated with identified findings.

Assessment status: Complete

Remediation status: In Progress

Validation status: In Progress

Overall Security Improvement: Ongoing
